EDUCATION

University of Tennessee, Knoxville

Bachelor of Science in Computer Science

Knoxville, TN

Aug. 2024 – May 2028

- GPA: **3.47/4.0**
- Involvement: Hack4Impact (Director of Engineering), Indian American Association

EXPERIENCE

LaRevela LLC

Agentic AI Developer

Jan. 2026 – Present

Franklin, TN

- Architected and implemented an AI-driven lead engagement backend (Python, FastAPI, MySQL), automating **60%+ of inbound outreach**
- Built a scalable asynchronous orchestration system polling Gmail, classifying lead intent via OpenAI APIs, and triggering real-time workflows with **less than 1-minute response latency**
- Increased demo booking conversion by **35%** through integrated Calendly-based scheduling with personalized AI-generated outreach flows
- Optimized backend performance by **30%** through async task execution improvements

Thrive

Software Engineering Product Manager

Sep. 2025 – Present

Knoxville, TN

- Led a **9-person engineering team** building “Thrive,” a full-stack operations platform (React, Next.js, PostgreSQL) supporting **220–250 at-risk youth** daily across 5 Knoxville program sites, replacing fragmented tools and reducing **\$6K** in annual software costs
- Defined product roadmap and system requirements for a nonprofit operations platform coordinating academic support, mentoring, and meal programs across **K–12 services**
- Collaborated with engineering team on system design decisions including **data models, API structure, and platform architecture** to ensure scalable and maintainable product development
- Managed Agile workflows using Jira and GitHub, overseeing release cycles and deployments supporting **1,100+ annual volunteers and staff** across multiple program sites, improving deployment velocity by **15%**

University of Tennessee, Knoxville

Computer Vision Engineer (Research)

Sep. 2025 – Present

Knoxville, TN

- Built a hybrid computer vision tracking system combining IoU-based temporal tracking with neural re-identification to maintain identity consistency across video sequences
- Implemented sliding-window tracking over **25 frames**, improving robustness under occlusion and fast motion while reducing identity switching
- Designed a confidence-based inference system that triggers re-identification only under tracking uncertainty, reducing unnecessary model inference and improving compute efficiency by **30–40%**
- Evaluated system on **CUHK03 dataset (13K+ images, 1,467 identities)**, achieving **62% Rank-1 accuracy**

LeadsPedia, Inc.

Software Engineering Intern

May 2025 – Aug. 2025

Franklin, TN

- Built a full-stack **HR management platform** (PHP, MySQL, JavaScript) supporting **20+ employees**, centralizing PTO tracking, performance management, and internal reporting workflows
- Implemented **role-based access control (RBAC)** with session-based authentication, securing sensitive HR data and eliminating unauthorized access pathways
- Designed relational database schemas with **audit logging and soft deletes**, enabling structured reporting and historical tracking across HR workflows
- Delivered features across **8+ Agile sprints over 3 months**, ensuring on-time delivery, cross-team alignment, and system maintainability

TECHNICAL SKILLS

Languages: Python, PHP, JavaScript, C++, Java, SQL (MySQL/Postgres), HTML5/CSS3

Frameworks/Libraries: React, Next.js, PyTorch, TensorFlow, OpenCV, NumPy, Bootstrap 5, Tailwind

Developer Tools: Git, GitHub, Docker, MySQL Workbench, VS Code, PyCharm, Figma, Jira

Systems & Platforms: Linux/Unix, Nginx, Google Cloud Platform (GCP), AWS
